

Observed versus out-degree-matched expectation

Reversal rate is not set by out-degree

49 regulators above degree-matched expectation

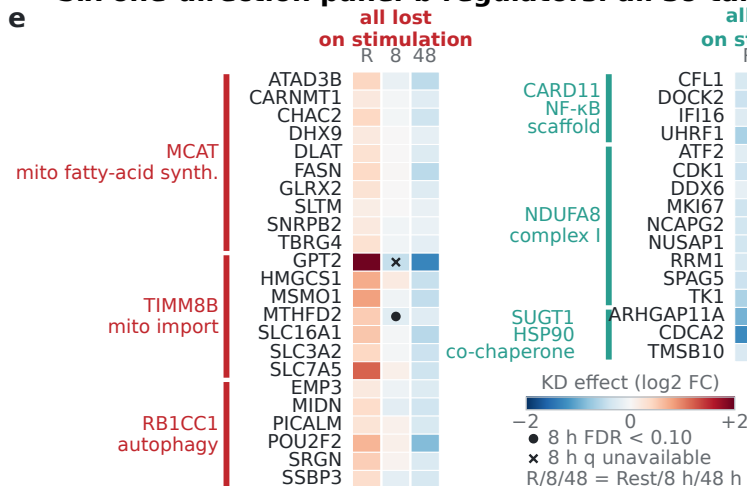

Full-census KEGG ORA

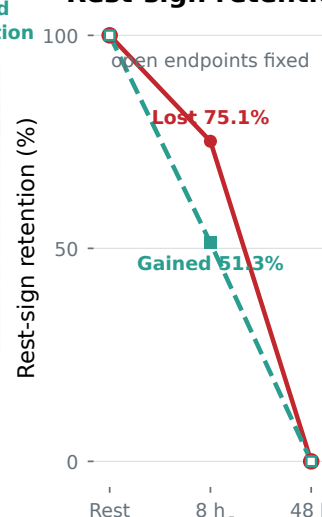

2,577 reversal targets / 9,554 eligible
14 Fisher/BH $q < .10$
global $p = .184$; maxT 0/113

pathway	T	L/G	ORA q	
JAK-STAT signaling pathway		64/21	0.0779	○
Cytokine-cytokine receptor interaction		75/34	0.0435	○
Gap junction		18/18	0.0921	○
T cell receptor signaling pathway		48/21	0.00535	○
Natural killer cell mediated cytotoxicity		33/19	0.0606	✖
Oocyte meiosis		22/35	0.0779	○
Cell cycle		23/60	0.00486	○
Neurotrophin signaling pathway		30/41	0.0786	○
Apoptosis		37/28	0.0475	○
Proteasome		13/40	0.00749	○
MAPK signaling pathway		58/55	0.0528	○
Chemokine signaling pathway		38/49	0.0786	○
p53 signaling pathway		24/40	0.00188	○
Antigen processing and presentation		12/43	0.0338	🍀

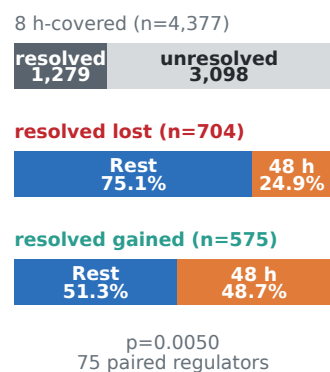

Six one-direction panel-b regulators: all 39 targets

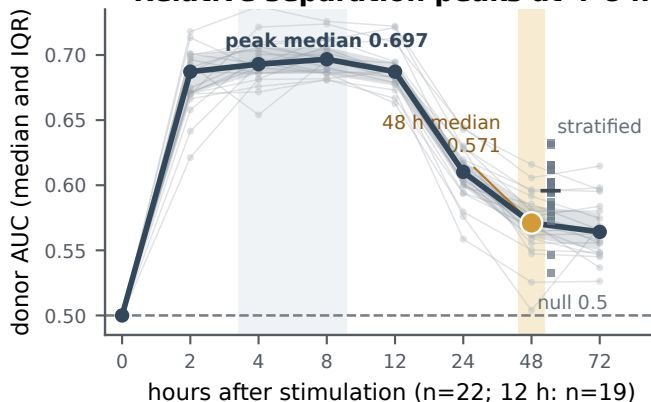

Rest-sign retention

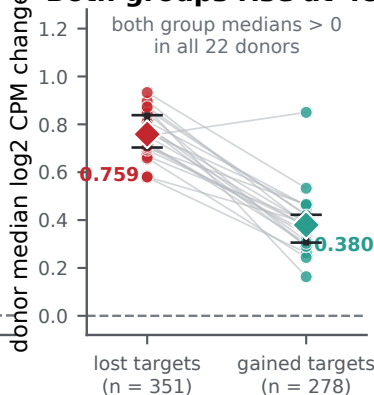

8 h classification

Relative separation peaks at 4-8 h

Both groups rise at 48 h

Target orientation (n=903)
